### **From the Editor's desk**

Time passes away and at the end of a tenure it seems it was only yesterday we started the session. It is now a time to look to the back and assimilate our learnt knowledge and utilize this in near future to serve people. One of the goal of this Journal is to give our students a chance to share their experience with all of us and enlighten ourselves with the various interesting cases that were dealt with in practical fields.

Undoubtedly our centre is the one and only USG teaching and training institute that gives its students ample chance to master in the subject. It will be revealed by the quality of the articles presented here and the editor thanks each and every contributors sincerely for their modest effort. It must be reiterated that the uniqueness of this journal lies in the fact that it belongs solely to the trainees and care has been taken to minimize errors, as much as possible.

Ultrasonography is not only a first line diagnostic modality in many diseases but also a cost effective and non invasive method which has gained popularity since its arrival. Effective training means both theoretical and practical knowledge which is being imparted in our institute effectively. This Journal is only a mirror to our endeavour.

So, happy reading.....
